Dear Zukerman of Tisla,

I recognize that submitting job applications is a long process. So, I've created this easy to work with word to pdf template.

In order to use it, add your word template. Surround your variables with square brackets, preferably snake_casing because I'm a fan of python. Use the included settings.json to add default parameters. Then run scripts.

If you want to change variables on the fly, such as recipient's name or company, do the following scripts.

Sincerely,

STEVE JOBLESS
